Notes

Supplemental Program WEIGHTLIFTING

Starting Level:

YELLOW

Prepared For:

Frequency:

2x per week for 4 weeks
(8 progressive sessions)

Time Required:

Approx. 20 minutes

Warmup

General Warmup: Airbike/Row

On a bike or rower move for 2 minutes to bring your body temperature up. Go at a consistent pace so that by the end your breathing and heart rate are elevated. You shouldn't be tired, you should be ready to work.

Mobility Preparation:

45s Lizard Right - 45s Lizard Left

45s Pigeon Right - 45s Pigeon Left

Directions:

Lizard:

Get into a deep lunge position with one hand on the ground and the other on the front foot. Relax your back leg and allow the hips to drop towards the ground. Keep your up knee out and use the hand to keep the foot from lifting. If you feel comfortable here you may drop to your elbows to get deeper.

Pigeon:

From a bottom-of-a-lunge' position, mindfully slide the down-knee back & the up-knee down so the shin is flat in front of you. Lean over the front leg until you feel a stretch in the hip/glute. Be mindful — this is a vulnerable spot for the hip & knee.

Activation Preparation:

Fast feet

Instructions

Stand in place with your feet under your hips. Move to the balls of your feet, bend your knees slightly, and run in place, attempting to tap the ground with each foot as many times as possible within 10 seconds. You should not become fatigued and finish before you are out of breath. This is working your brain and coordination -- which is crucial in the weightlifting category.

Working Sets

Russian Swing 4- 6 sets of 20 seconds 26/18; 1 min rest

Directions:

Starting position: Feet approximately hip width, in full extension (fully standing) and grasping kettlebell between legs. Initiate movement with hinge at the hips and then a full extension. At the top of the swing, the bottom of the KB should be at eye level with knees and hips at full extension.

Instructions

Start with a lighter weight before starting on the work sets. Make sure the movement feels good. Then accumulate 4 to 6 sets of 20 seconds of work. Focus on staying tight with your back straight and squeeze your butt at the top (when the KB is at eye level). You should not become so fatigued on this that you lose form. Each set should finish STRONG.

Accessory Work - Airbike: 3 sets of 20s max

Your goal is to go HARD on this. Coordinate your push & pull to increase the output. By actively pushing and pulling, rather than only pushing or pulling, or by using only arms or legs you will make this exercise more valuable. Focus on feeling & maintaining tension on the bottom of the feet. Don't just go through the motions: actively coordinate all the elements in one flawless flow and go HARD. Rest as needed between sets
